Actual Scenario

- *Maritime & Shipping Vs Inland & Last Mile*
- *Digitalisation & automation as solution: Terminal Operating System*
- *Federated Services*

Evolutions, challenges and opportunities

1. *Digitalisation of railway procedures among the Supply Chain*
2. *Interoperability & information flows: the Port Community System*
3. *Inland & Rail last mile procedures: modular solutions*
4. *International Fast & Secure Trade Lane approach: integration with IoT*
5. *New technologies applied to the logistic sector: Blockchain, Smart contract & Notarisation*
6. *Customs 2025 and Gate Automation, Port Tracking, Fast Corridor*
7. *Complexity, Real time Optimisation & Artificial Intelligence*

Actual Scenario: Maritime & Shipping vs. Inland & Last Mile

Digitalisation & Automation as solution: Extended Terminal Operating System + Value Added Services

A **Terminal Operating System (TOS)** is a key part of a supply chain and primarily aims to control the movement and storage of various types of cargo in and around a container or multipurpose terminal. It allows operators to **digitalize and automate** operative, administrative and customs procedures, also thanks to **IoT technologies** and **automation** solution natively integrated

TOS - Solution and interconnected systems

Specific connectors allows TOS Suite to be integrated with the proprietary ERP system and to dialogue with supply chain players' IT systems (e.g. PCS, Shippers, Freight Forwarders, Customs Agencies, etc.) in order to deliver value added services in terms of innovation, access to information, total digitalization.

In addition to TOS basic features, a series of modules with high added value can be offered: they allow to **manage customs, administrative and commercial activities**, to automate and optimize the gate and the **equipment and HR management** and to monitor the performance of the terminal through productivity tool module.

TOS Suite allows to digitalize and automate the **main terminal operations** relating *Rail, Vessel, Yard* and *Gate* activities of a multipurpose logistic terminal also thanks to the *Mobile App*. The solution enables to manage different type of cargo handled (cars, containers, general and rolling cargo, machinery, yachts and boats, project cargo, etc.)

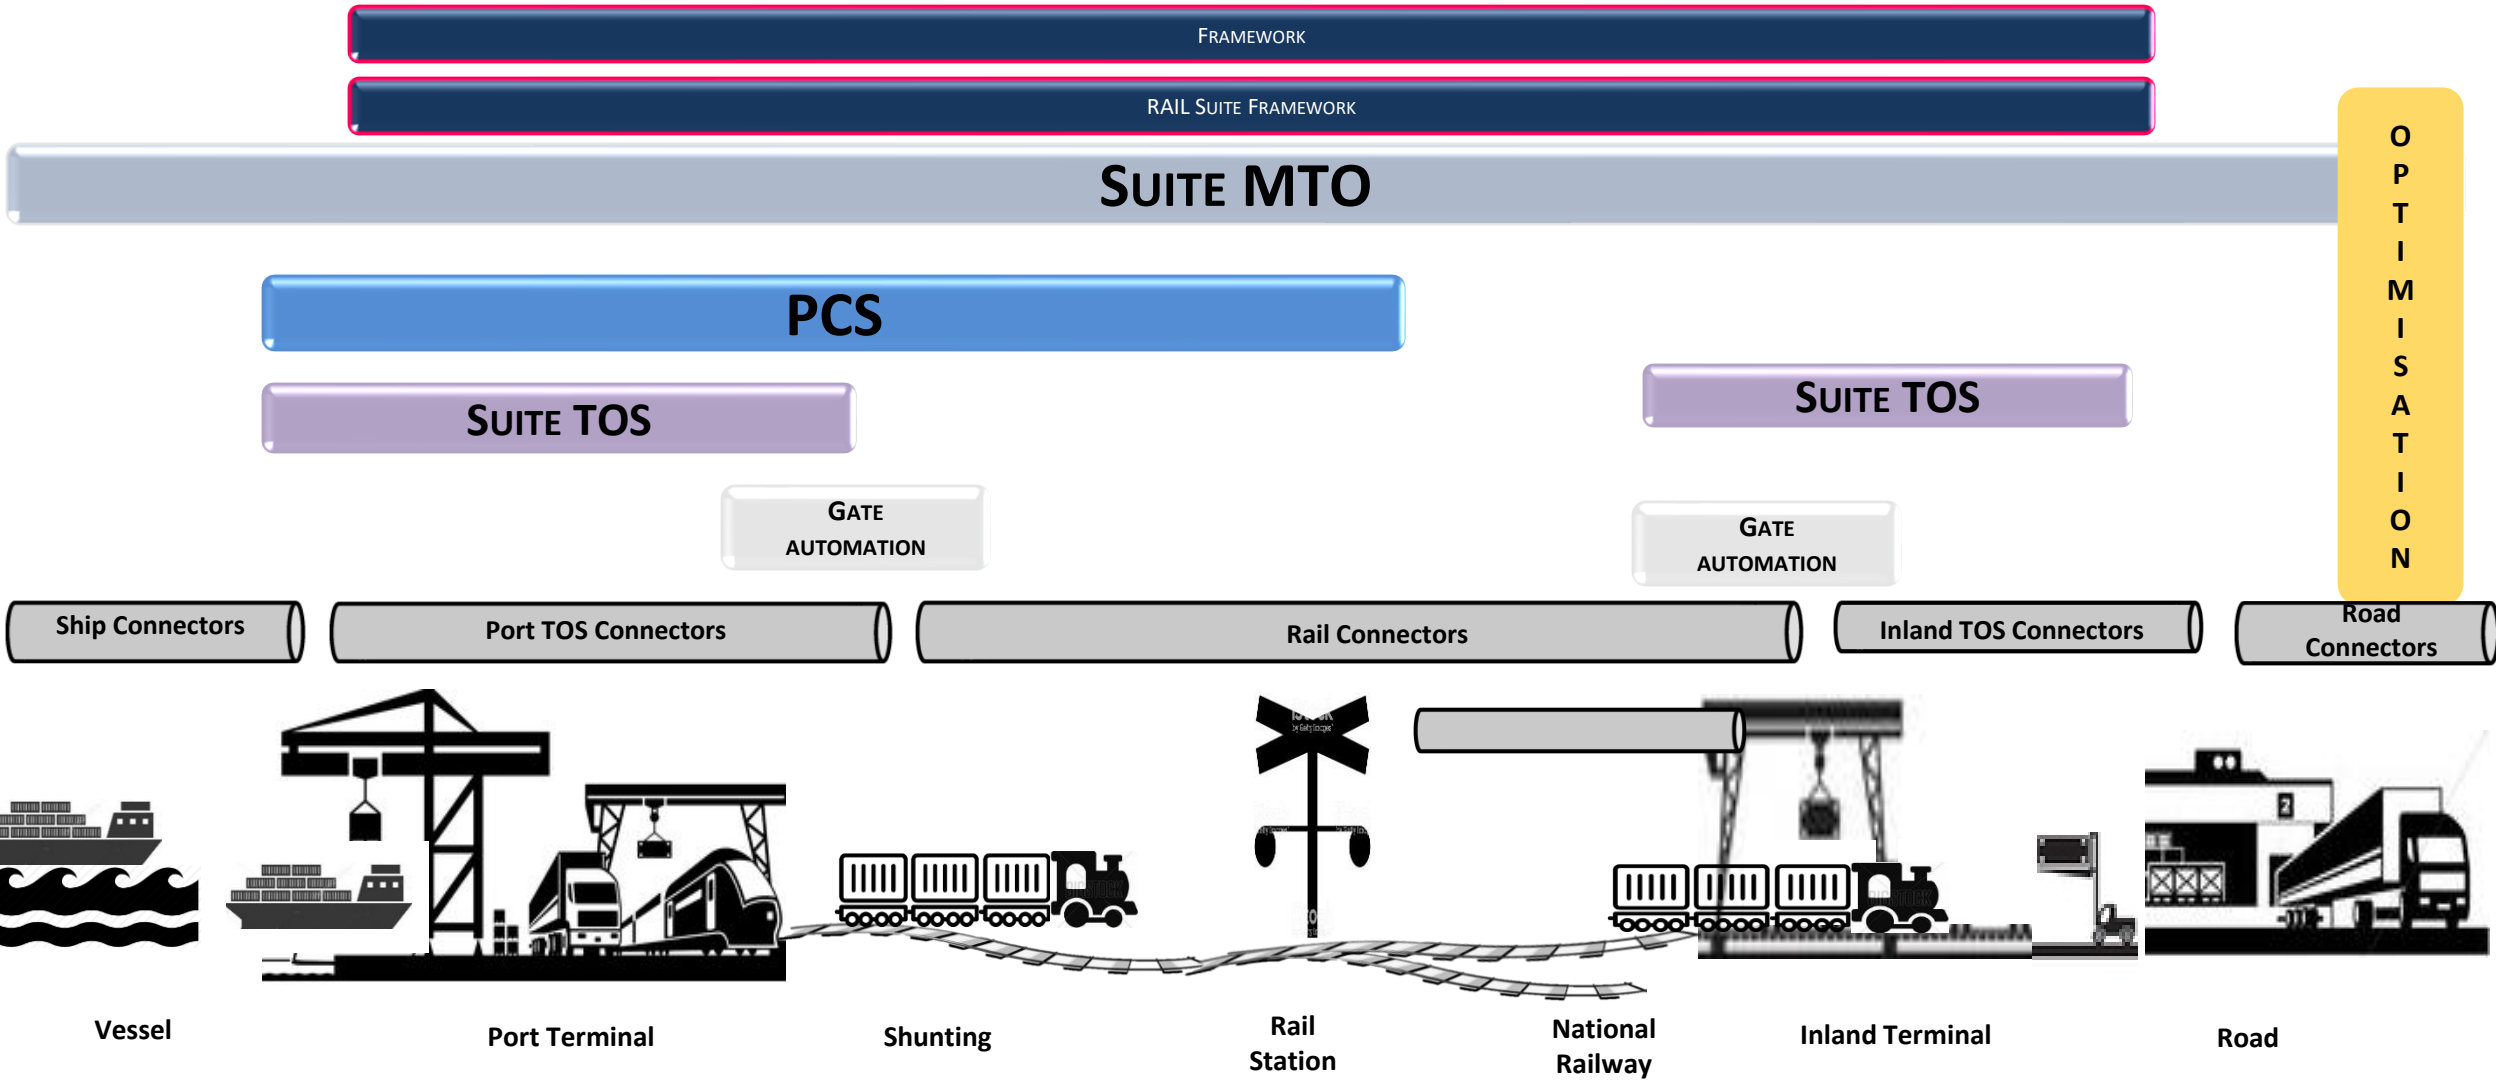

TOS is able to digitally share **reliable information** with a plurality of actors and IT systems:

- **Shipping agencies**, with the exchange of information about shipping and booking information;
- **Shipping Companies**, with the exchange stowage plans, cargo documents and reports;
- **Port Community System**, with the share of information relating Port Securities and Port Processes managed
- **Customs IT Systems**, with the exchange of Cargo Manifests (in Italy Aida for MMA and MMP, TC dialogues, Fast Corridor dialogues and info, simplified and evolved procedures – soon Port Tracking via PCS);
- **Transport companies / Freight forwarders / MTO**, for arrival / departure forecast, booking, gate appointment
- **Customers/Shippers**, with the possibility to exchange reliable information relating stock reports, damage reports and delivery information (proof of delivery)

Digitalisation of railway procedures among the Supply Chain

Modular & federated solutions for a compound process

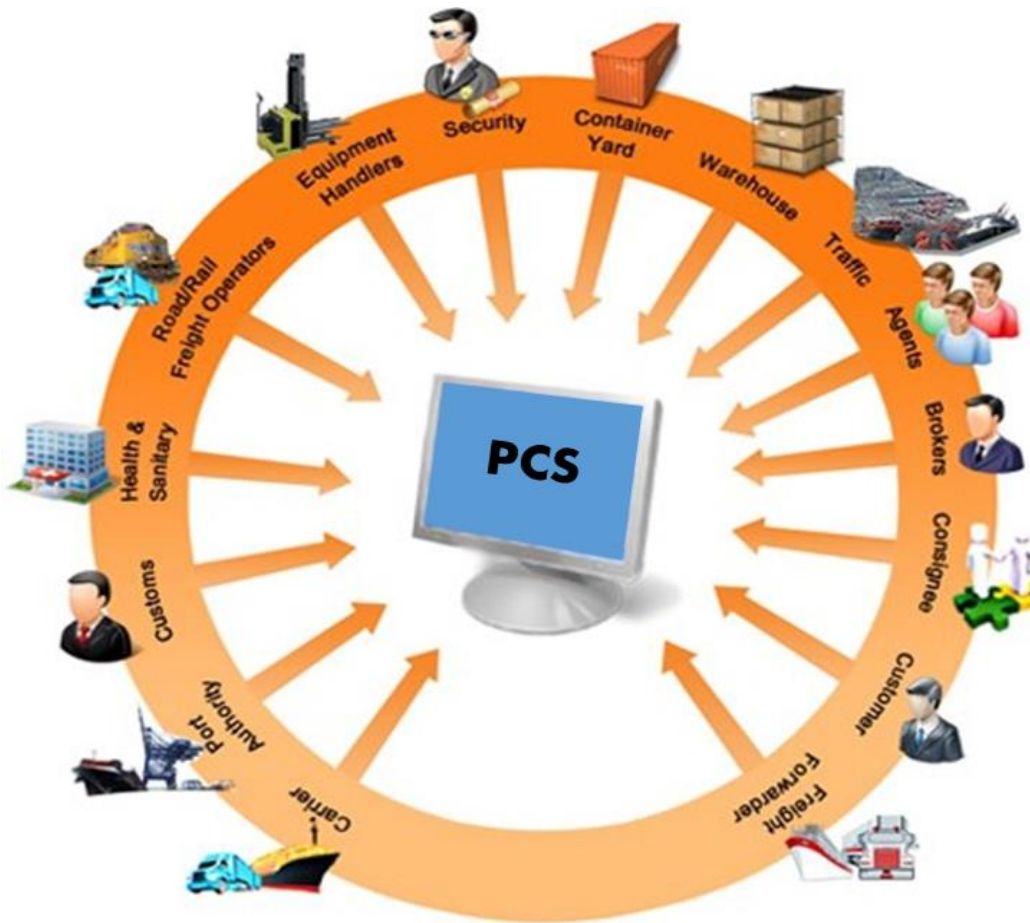

2

Port Community System connectors

Interoperability & information flows: the Port Community System

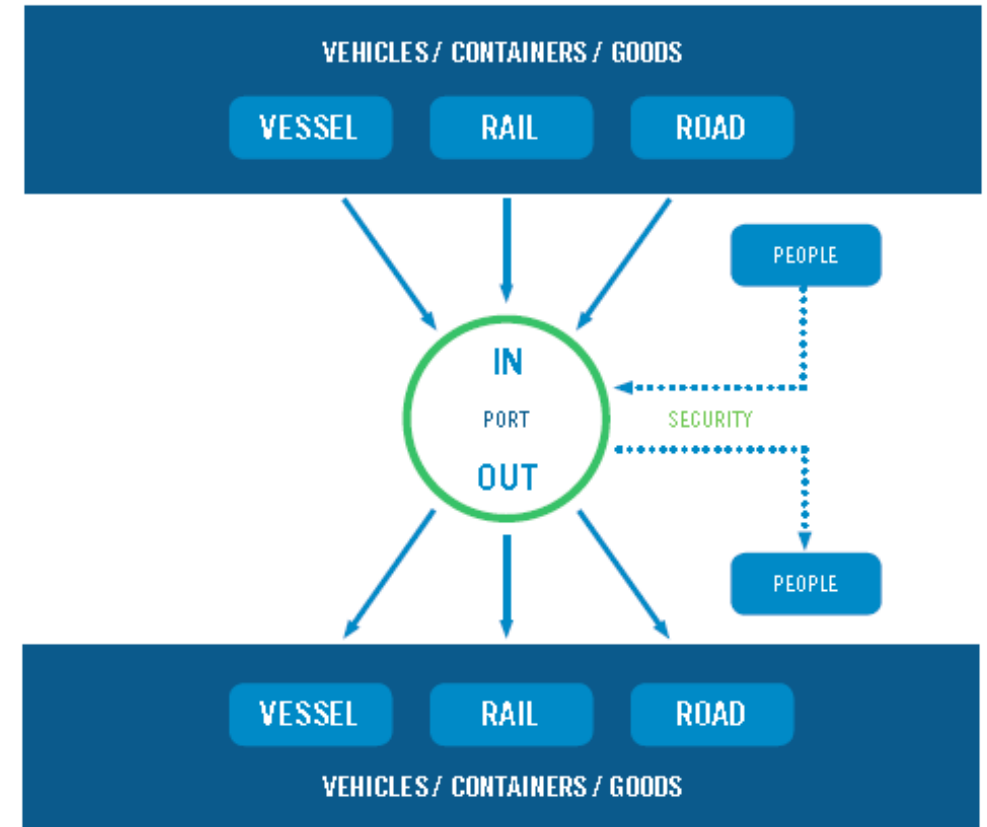

Port Community System (PCS) connectors helps transport and logistics operators to interoperate with **IT systems** of freight forwarder, Port Authorities, etc.. in order to access at their service platforms.

The **PCS connector** allows transport and logistics operators interacting with **PCS services and functionalities**. It is set up with «general Web Service» in order to access to specific functionalities provided by Port Authorities, such as operative (operational readiness of freight, estimated/actual time of arrival of ships at port, gate in/out port security gate, etc.) and customs information.

PCS Connector has to have a native integration with the related **PCS**, a complete framework of solution for **managing port activities** within port Administrations.

- Early check of entry and exit permits
- Consequent reduction of waiting times
- Management of arrival notice (direct on PCS or mediated through Logistic Platforms)
- Automatic checks with terminals for early verification of the availability of goods
- Gate Appointment interoperability

Inland & Rail last mile procedures: modular
solutions

Contesto scali merci: i progetti di RFI sull'ultimo miglio (2017)

- ❑ In aggiunta agli investimenti previsti dal Contratto di Programma, RFI ha avviato nel 2017 una serie di tavoli tecnici con i terminalisti per individuare le azioni infrastrutturali da mettere in campo per potenziare l'offerta merci.
- ❑ Il processo prevede la sottoscrizione di un protocollo d'intesa tra le parti per definire gli impegni del gruppo di lavoro che, individuate le necessità, proporrà una soluzione infrastrutturale e tecnologica adeguata.

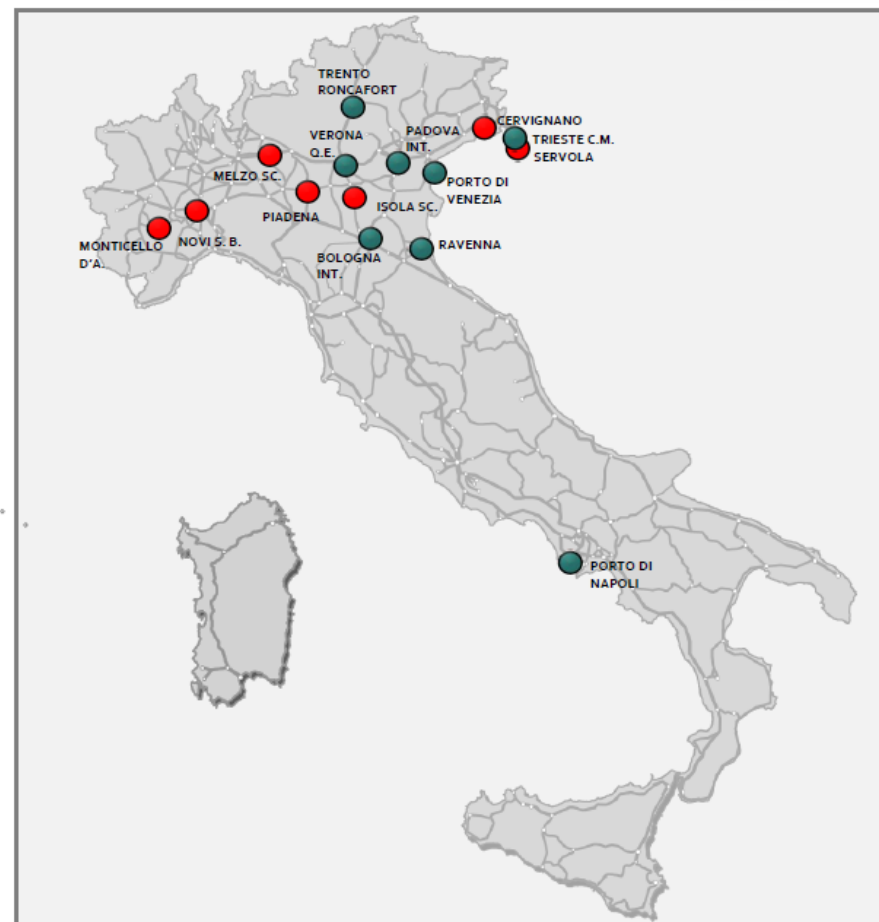

Impianti oggetto di Protocollo d'Intesa

- ✓ Porto di Venezia
- ✓ Bologna interporto
- ✓ Padova interporto
- ✓ Verona Quadrante Europa
- ✓ Trieste Campo Marzio
- ✓ Trento Roncafort
- ✓ Porto di Ravenna
- ✓ Porto di Napoli

Interventi in fase di studio/progettazione

- ✓ Melzo Scalo
- ✓ Novi San Bovo
- ✓ Cervignano
- ✓ Servola-Trieste
- ✓ Piadena
- ✓ Monticello D'Alba
- ✓ Isola della Scala

Informatics and informative **interoperability model** among the subjects involved in the optimal **Rail Last Mile management**, considering as last mile the way between **port's** and **inland terminals**.

International Fast & Secure Trade Lane approach:
integration with IoT

The era of digitization is changing the supply chain globally. For this reason, the concept of International Fast & Secure Trade Lane was designed, which starts from a logic mainly aimed at **shippers** and **freight forwarders** and extends to all those involved in the logistics chain

The key words of the International Fast Secure Trade Lane are:

1. International
2. Fast
3. Secure
4. Trade Lane

This concept is extended to the entire logistics chain in order to create door to door chains that involve all the actors, manage by anticipating the flows of documents and information provided by the various stakeholders, using the Corridor Management Platform.

Integration with:

- Internet of Things (IoT)
- Track & Trace + Federative approach and Platform interoperability

International Fast & Secure Trade Lane flows

- Digitization of European documents flow
- Digitization of international documents flow through direct dialogue between countries, European – Not European Customs, Importer and Exporter

Example of a cycle that uses IoT tools and tags in the IFSTL

1) Shipper/Stuffing area warehouse

Baptism in compliance with the most common passive RFID eSeals

Passive RFID eSeals for container

** The Data collected by IoT device can be stored inside Blockchain Platform*

2) Gate Terminal

Automatic Gate-in at the terminal thanks to RFID antennas

3) Port Terminal of departure

4) eManifest sent to Port of destination

Digital check of loading operation with handheld + eManifest data integration

5) Port Terminal of Destination

Digital check of discharging operation with handheld

Automatic Gate-out at the terminal thanks to RFID antennas

6) Final destination

Proof of delivery

5

New technologies applied to the logistic sector: ,
OCR, Blockchain, Smart contract & Notarisation

- **Pilot Maersk / IBM Tradelens**

TradeLens is a multinode private blockchain solution for maritime supply-chain logistics. It is based on IBM's implementation of Hyperledger Fabric (PaaS). The containerized microservice platform is horizontally scalable and delivers its functionalities to the project participants through a publicly available API layer.

- **Participation of Bill of Lading Pilot**

A decentralized application deployed on the Ethereum blockchain. Its main purpose is to handle and certify data interchange between users through a set of Smart Contracts and to provide document immutability by using IPFS as a secure and unbiased storage service.

- **IPCSA digital Bill of Lading Pilot**

A private blockchain solution developed with Hyperledger Fabric on Azure Cloud. The distributed application is designed to leverage high data throughputs and heterogeneous formats by instantiating a Smart Contract for each Bill of Lading.

•

- **Preliminary IFSTL IoT Pilot**

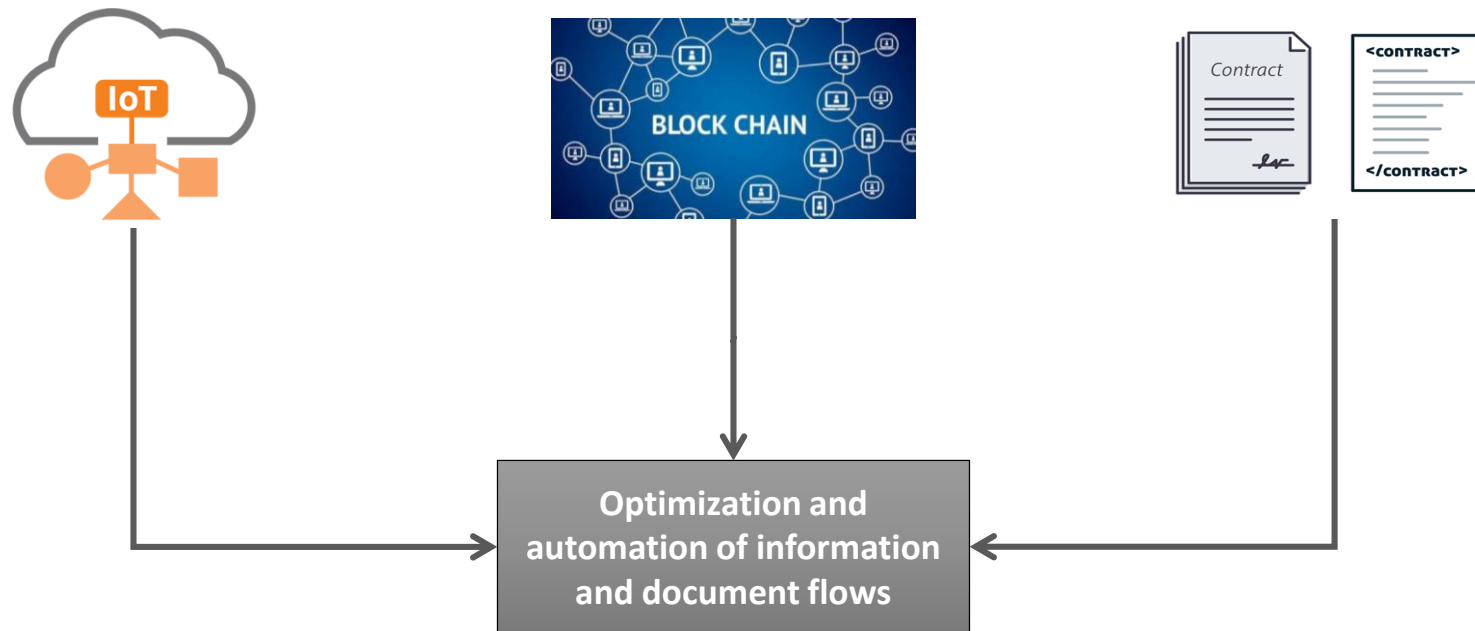

Distributed notarization service for document and data interchange based on client-server-signer interaction model. The system has been designed to generate a verifiable signature by using blockchain's metadata as proof of existence medium.

- **Notarization Pilot**

Blockchain service for document management that is built upon Ethereum Smart Contracts and decentralized storage systems. It's goal is to certify the documents by creating a provable timestamp and storing the resulting authenticity reference data on the blockchain.

Integration of Blockchain, IoT and Smart Contract

The combined use of smart devices **IoT** and digital tools such as **Blockchain Platforms** and **Smart Contracts** has the purpose to dematerialize the transport procedures and relative contracts leaving traces of all operations and events occurring within the Logistics Chain.

IoT & Blockchain is designed to integrate these innovative solutions

The objective of the ongoing project is to support the **process** of "validation and certification" of documents with a **customs & security value**, throughout the entire process, with a **complete management of documentary flows** in ONCE logic for the subsequent phases of customs verification, using the **notarization*** and **new technologies** based on distributed registers.

This solution is **integrated** within the **Global Supply Chain Visibility** which allows the **entire handling process** to be coordinated between private individuals and along the international chains, maritime, port and intermodal logistics.

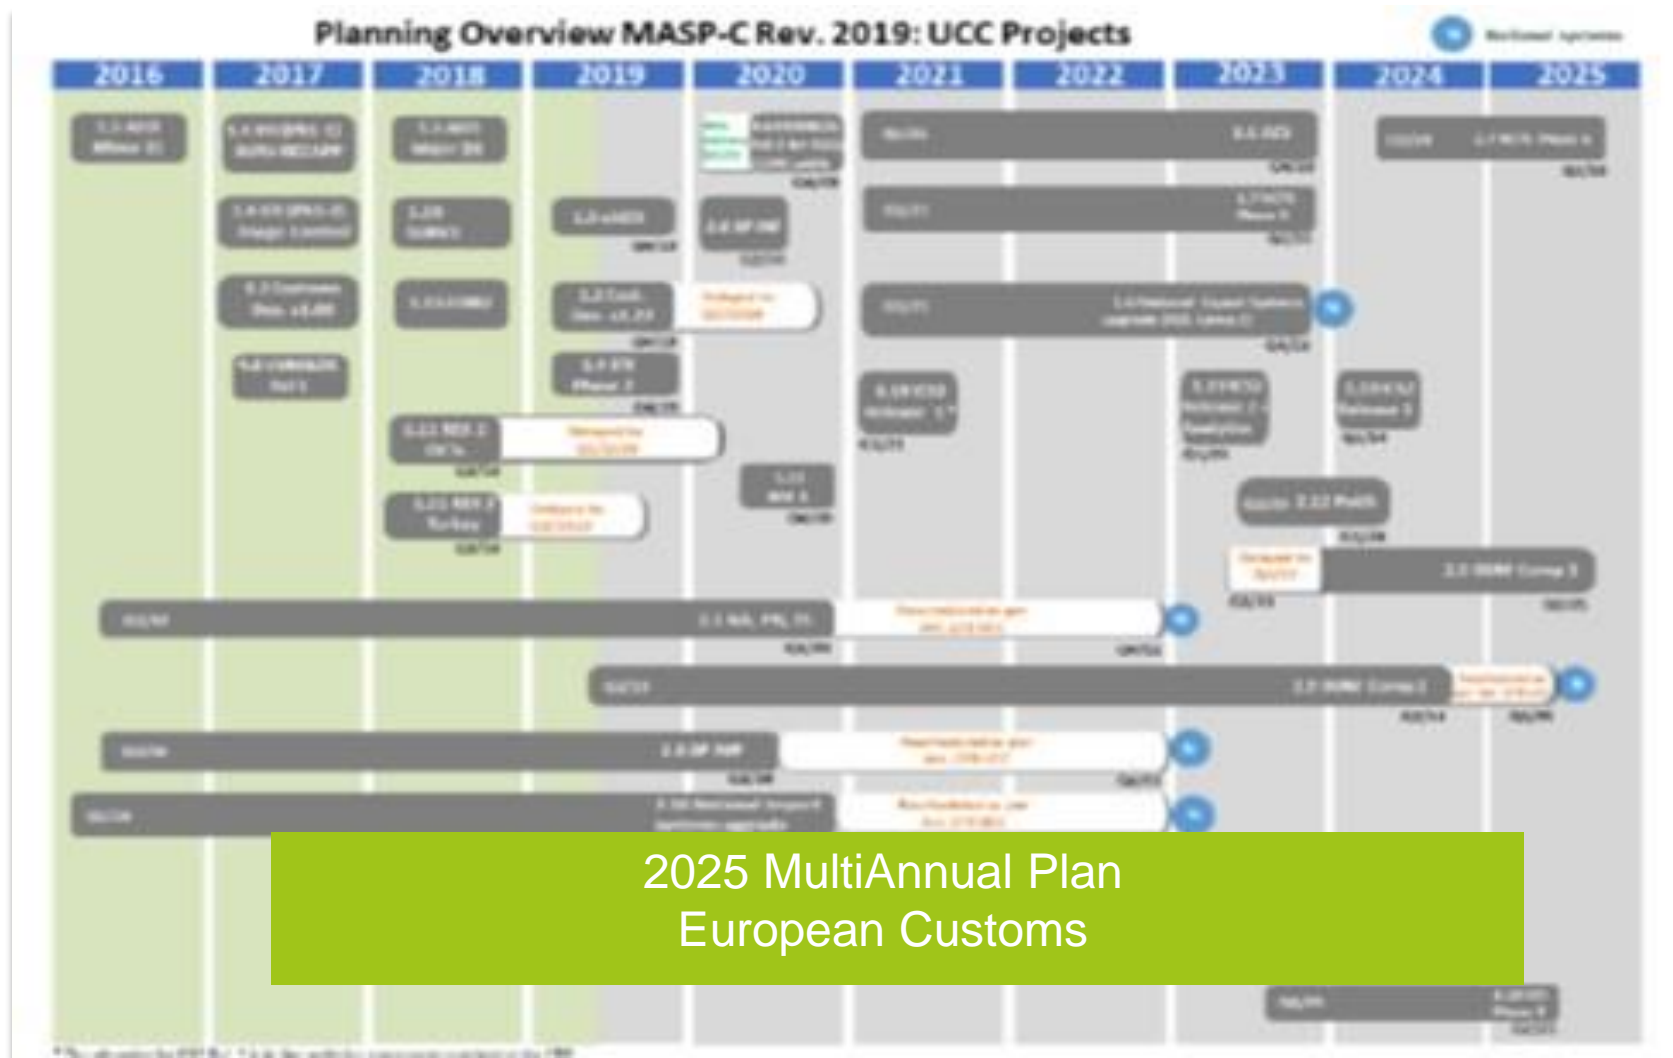

* *Notarization (or "legalization") means the procedure by which originality is attested (the document in question corresponds perfectly to the original) and existence at a certain date and time ("timestamp") of the document itself. After notarization, confirmation of the immutability of this document (inherent in the notarization properties) is confirmed.*

Circle Group

Circle Group is an international player which operates in the context of **process** and **management consulting services**, and in providing **innovative technological solutions** for **automation** and **digitalisation** of the entire supply chain.

The Group is led by **Circle SpA**, a company with distinctive vertical skills in the port sector and intermodal logistics and listed on AIM Italia since October 2018. Thanks to the deep experience of its management not only in ICT field, but also in **EU-funded projects**, Circle SpA assists indeed Public actors and Private companies in developing new businesses through specific instruments of **Project Anticipation** and **EU Branding**.

At the end of 2017 Circle SpA acquired 51% of **Info.era**, and in July 2019 acquired 100% of **Progetto Adele**.
